

About Alakakit Building Systems

Alakakit Building Systems is a supplier of green friendly, quality insulated construction panels and complete cabin and home kits. These panels and related products are used for construction of building walls, ceilings, roofs and floors. These panels are structurally superior, lighter in weight and provide better insulation than conventional structurally insulated panels that are presently in the market place, commonly known as sips panels.

Alakakit uses industry standard EPS panels in our construction packages. We market our product line into the residential and commercial markets in Alaska.
